

DEVELOP A PYTHON SCRIPT

Date	21-10-2022
Team ID	PNT2022TMID25068
Project Name	Smart Waste Management System for Metropolitan cities
Maximum Mark	4 Marks

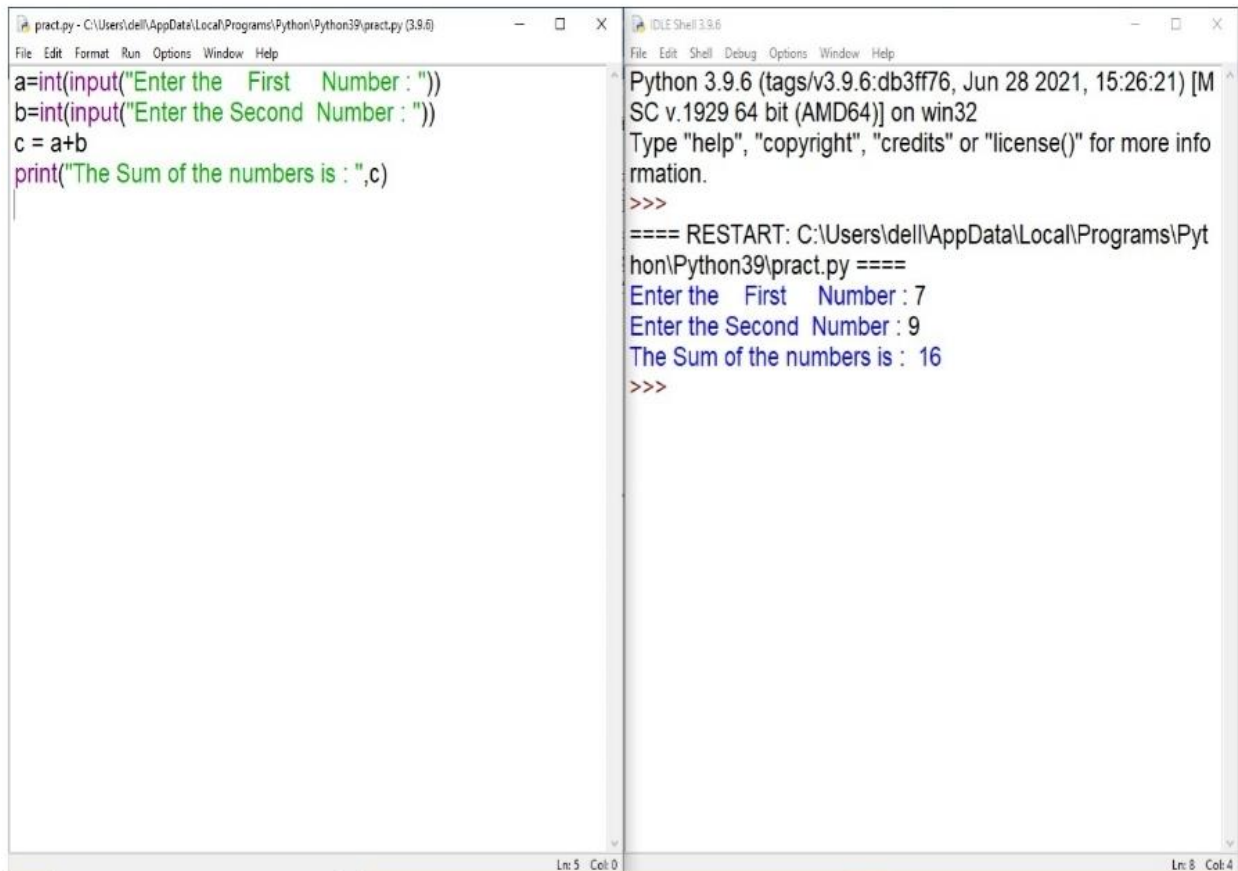

Script:

```
a=int(input("Enter the First Number : "))
```

```
b=int(input("Enter the Second Number : "))
```

```
c = a+b
```

```
print("The Sum of the numbers is : ",c)
```

The screenshot displays a Python script in an IDE window titled 'pract.py - C:\Users\deell\AppData\Local\Programs\Python\Python39\pract.py (3.9.6)'. The script contains the following code:

```
a=int(input("Enter the First Number : "))
b=int(input("Enter the Second Number : "))
c = a+b
print("The Sum of the numbers is : ",c)
```

The output window on the right shows the execution of the script. It starts with the Python version and architecture information: 'Python 3.9.6 (tags/v3.9.6:db3ff76, Jun 28 2021, 15:26:21) [MSC v.1929 64 bit (AMD64)] on win32'. It then prompts for input, showing the user entering '7' for the first number and '9' for the second number. The final output is 'The Sum of the numbers is : 16'.
